

SIWERTELL SHIP UNLOADER - USA

TOTALLY ENCLOSEDFROM SHIP TO SHORE

The delivery of this Siwertell ship unloader is a part of a cement facility with a flat storage area. An important criteria that led the customer to select Siwertell as a supplier was the environment-friendly features

About

All conveyors, from pick-up in the ship's hold to the storage area are totally enclosed and provide a clean and spillage free operation. This criteria was one of the most important ones for the customer when selecting the Siwertell equipment.

After the installation of the unloader, an additional airoslide system (size 630mm) for cement distribution to the flat storage, as well as two screw conveyors for fly ash handling, were ordered and installed.

Both the ship unloader and the terminal conveyors provide capacities up to 800t/h.
