

Product data Access ways

Access ways are most important for safety and ease of operation, and an important part of the high Siwertell product standard.

Products like the Siwertell ship unloaders and loaders are equipped with a number of walkways, platforms, stairs, ladders and handrails. These are hot dip galvanised and bolted to the structure. As an option they can also be painted.

Siwertell

Siwertell design follows applicable international and national safety standards in the country of installation, and are designed specifically for each application. For example, standard off-the-shelf access ways are not easily adopted to a ship unloader without compromising the function. Siwertell therefore uses its own engineering and manufacturing network.

Spending some extra time and money on access ways is not a luxury. It is the best long term solution for both the equipment and the staff operating it.

Contact

Siwertell works closely together with representatives on all continents. Please contact our head office below and we will direct you to your local Siwertell contact.
